## WHAT IS MICRO RF?

Micro RF is a new aesthetic treatment technology that delivers Radio Frequency Energy deep into your skin, stimulating collagen remodeling to restore laxity and firmness, while helping to remove fine lines and wrinkles. Micro RF is also very effective in reducing the appearance of acne scars, surgical scars and stretch marks.

## WHY IS MICRO RF DIFFERENT THAN OTHER AESTHETIC TREATMENTS?

Multi Source Bi-Polar Radio Frequency has many advantages compared to conventional laser treatments such as Fractional CO2 and Erbium lasers, as we can now deliver RF energy deep into the skin regardless of skin type or skin color. The energy is delivered in a controlled, predictable fashion, while maintaining a comfortable temperature on the skin's surface. This is why patients experience little-to-no downtime following the procedure.

## WHAT AREAS OF THE BODY CAN I TREAT WITH MICRO RF?

The most common treatment areas with RF Micro are the face and neck, to reduce fine lines and wrinkles and tighten skin on the jowls and neck. It is also a very popular treatment to reduce the appearance of acne scars on the face.

Micro RF is not limited however to the face and neck. The treatment can also administered on the chest to improve wrinkles and skin laxity; the abdomen and thighs to improve the appearance of stretch mark; and any other body area where skin laxity needs correction.

## HOW MANY TREATMENTS ARE REQUIRED TO SEE RESULTS?

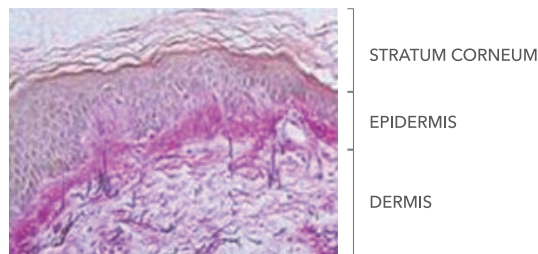

Treatment protocols are customized to each patient's specific need. Typically, treatments are delivered in a series of three to five treatments, spaced 30-days apart.

You can expect to see improvement approximately 30 days after your first treatment, with continuing improvement as the series of treatments progresses. As your body forms new collagen, your skin's texture and laxity will improve. This process can continue for as long as 6-months following your series of treatments.

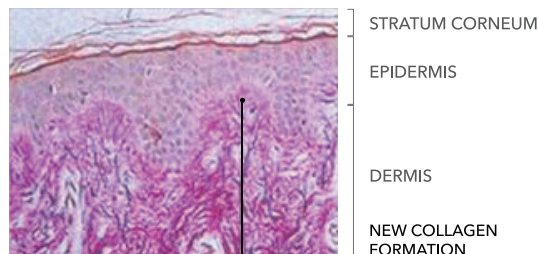

## WHM (WOUND HEALING MECHANISMS) BY MULTI-LEVEL RF ENERGY

Treatment protocols are customized to each patient's specific need. Typically, treatments are delivered in a series of three to five treatments, spaced 30-days apart.

## CIT (COLLAGEN INDUCTION THERAPY) BY MICRONEEDLING MULTI-LEVEL RF

When applied to the skin, under topical anesthesia, sterile microneedles are used to create many microscopic channels deep into the dermis of the skin that can stay open up to four to six hours. This stimulates the body to produce new collagen. The precise delivery of RF energy to 31 varying depths of penetration gives Micro RF exceptional outcomes.
